Pacific Die Cut Industries Unveils PDCI Medical as New Division

Hayward, Calif., March 29, 2005 – Pacific Die Cut Industries, the premier supplier of die cut and converted components for the life sciences and automotive markets, announced today that it will be opening an operating unit called PDCI Medical – a name that depicts the company's expertise in accomodating the manufacturing needs of the fast growing biomedical sector.

"As the leading supplier of custom parts like diagnostic test strips and transdermal drug delivery systems, we must ensure that our name clearly communicates our focus," says PDCI Medical's President and CEO, Mike Behnam. "Our biotech and pharmaceutical business has tripled in the past decade. We feel that by establishing a separate division and hiring additional engineering, manufacturing and sales talent in the medical field, we can offer our existing and potential medical clients more expert knowledge, assistance and quality products."

The biotech market – Fast paced and booming

Nearly a hundred billion dollars has been generated by the fast growing United States healthcare industry making the industry the engine of economic growth. From automated external defibrillators to cancer fighting treatments, breakthrough technologies have enabled humans to improve their quality of life.

PDCI Medical is an ISO certified and FDA registered supplier of custom converted components. The company specializes in precision die cutting, narrow width slitting and multi-layer laminating. Value added services include, but are not limited to: assembly, packaging, R&D and rapid prototyping.

PDCI Medical is located in Hayward, California. For more information, please visit their website at <http://www.pdcimedical.com>.
